ACCURPRESS

# UPGRADE YOUR EXISTING ETS3000 SOFTWARE TO VERSION 8

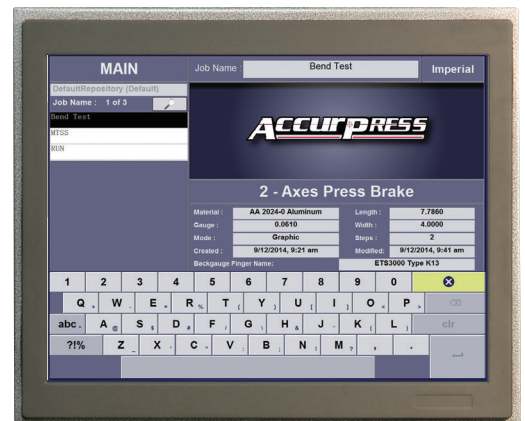

## NEW LOOK

Accurpress is excited to announce the arrival of ETS3000 Version 8! With this update we have brought you a new color scheme as well as several visual enhancements to create a great looking press brake control. Upgrade your current ETS3000 control to take advantage of several newly added features.

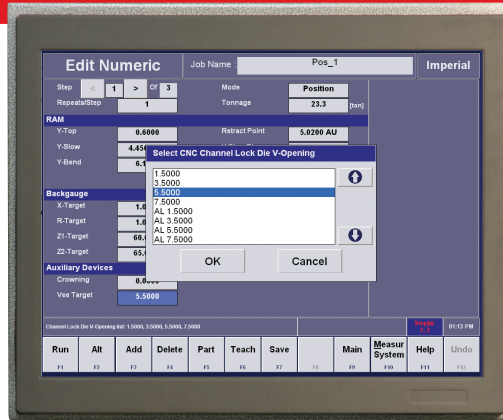

## TOUCH SCREEN

With Version 8, navigation throughout the ETS3000 program is now significantly expanded. Selecting and editing fields, program navigation, and overall use has never been easier with the new Touch Screen interface feature.

## ON-SCREEN KEYBOARD

Built into our latest version is a useful on-screen keyboard that works seamlessly with our new Touch Screen interface. Programs can be more readily edited with the keyboard now directly on-screen.

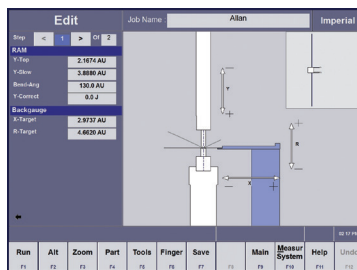

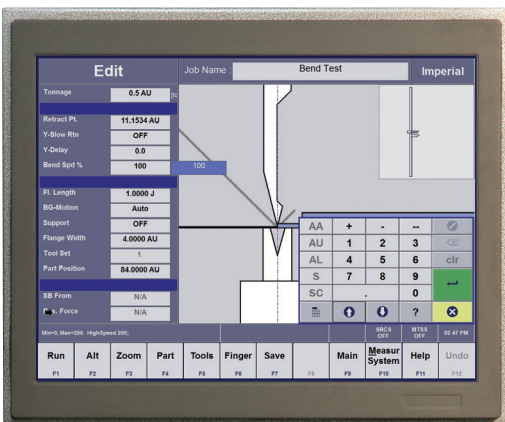

**TEACH MODE**

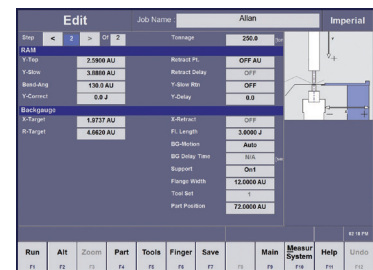

Teach Mode is a programming option in Version 8 that allows for machine positions to be captured manually. Teach Mode combines the quick set up of manual mode with multiple bending steps of other programming modes allowing the operator to quickly build multiple bend programs based on real world positions.

**POWERED ADJUSTABLE VEE DIE**

Version 8 has full software support for the Accurpress Power Lock Adjustable Die. All adjustable bottom vee openings are available for programming within the ETS3000 Control and will allow the die to automatically move into desired vee opening positions.

2D Drawing Mode Screen

Numeric Drawing Mode Screen

**ON-SCREEN NUMERIC KEYPAD**

Using the on-screen Numeric Keypad with the Touch Screen display is useful for all kinds of numeric adjustments and calculations. The Numeric Keypad is accessible at all times and will edit any selected numeric field.

# ETS3000 VERSION 8
